

Micro-Crystal & Diamond Dermabrasion

It's more than a facial and yet still a non-invasive lunchtime procedure!

BENEFITS OF MICRODERMABRASION

Through deep exfoliation, our 5-Step Microdermabrasion benefits include:

- Clearer and brighter complexion – it reveals that inner glow
- Stimulates collagen production to restore elasticity
- Reduces breakouts – unclogs pores and congestion to reduce acne, blackheads and breakouts
- Treats premature aging – treats sun exposure, dry skin, scarring, fine lines and wrinkles
- Promotes even skin tone and reduces pigmentation – corrects, strengthens and clarifies the skin

CRYSTAL MICRODERMABRASION

Crystal microdermabrasion uses a crystal-emitting handpiece to gently spray on fine crystals to rub away outer layers of the skin. Like the diamond-tip handpiece, dead skin cells are suctioned off right away.

DIAMOND MICRODERMABRASION

A diamond-tip handpiece is designed to gently exfoliate dead cells in your skin. At the same time, it will suction them off immediately.

The depth of the abrasion may be affected by the pressure applied on the handpiece as well as how long the suction is allowed to remain on the skin. This type of microdermabrasion applicator is generally used in more sensitive facial areas, like close to the eyes.

Microdermabrasion is a form of advanced exfoliation designed to remove dead skin cells, stimulate new cellular growth, and give the skin a fresh, smooth, luminous appearance. The treatment softens fine lines and wrinkles, decreases the appearance of age spots, hyperpigmentation, and scarring, as well as boosting collagen production and leaving skin supple and radiant.
