

FREEZE FAT AWAY with the 5 in 1 CRYOLIPOLYSIS

The 5 in 1 Cryo Laser-Lipo System is a Multi-functional fat loss system that can be used in conjunction with Ozone Technology to help get rid of those stubborn pockets of fat. It is a non-invasive, non-surgical procedure that involves the cooling of fat cells to induce lipolysis - the breaking down of the fat cells - to reduce body fat without damage to other tissues.

so... WHAT IS THE GOAL?

The goal of the Cryo Laser-Lipo treatments are to remodel the shape of the body and get rid of bulges of resistant fat - without the downtime of liposuction or surgical treatments - in a natural way.

How does it work?

Fat cells contain 'triglyceride', and in particularly low temperatures it is converted into a solid, which leads to the breaking down of those particular fat cells. Using advanced cooling technology to selectively target fat bulges, the Cryo Laser-Lipo System can eliminate the fat cells through a gradual process which doesn't harm the surrounding tissues. When fat cells are exposed to the precise cooling of the system, they trigger a natural process of removal that gradually reduces the thickness of the fat layer and are then gently eliminated through the body's natural metabolic processes.

Laser-Lipo is quickly growing in popularity due to the fact that it carries far less risks than liposuction and other surgical procedures, is non-invasive, and doesn't result in down time or scarring. With Laser-Lipo, specific areas can be targeted for treatment, including hard to reach and sensitive areas, such as the tummy, arms, hips, outer and inner thighs.

40KHz Cavitation:

Through the use of 40KHz sound waves that are emitted into the body, friction is caused between the fat cells. This causes effective consumption of calories and moisture within the cells, reducing their size. The impact of the sound waves can also cause the cells to break apart instantaneously, which then allows them to be expelled from the body in a natural way.

Body Radio-Frequency:

Using High-frequency Electromagnetic wave therapy, or RF Therapy, the skin & tissue is deeply penetrated, creating heat. This promotes skin regeneration, causes fat cells to shrink & tightens the skin, resulting in a firmer, slimmer look.
