

Renasculpt MACHINE

High-Intensity Focused Electromagnetic Technology + Electro Muscle Stimulation technology + RF
- 3 Machines built into a single treatment -

BUILD MUSCLE | SCULPT YOUR BODY | SKIN TIGHTENING

What you need to know

3 technologies in 1 - High-intensity Focused Electromagnetic Technology + Electro Muscle Stimulation technology + Radio Frequency.

Sleek and modern design, and built with the highest quality materials.

It is compact and has a very small footprint

Build muscle and reduce fat at the same time.

5 handles for different applications.

Perlvic cushion handle for reducing buttocks fat.

Easy to use 10-inch touch screen.

30 minutes treatment equals to 3000 muscle contractions or 3000 belly rolls / squats.

A full course of treatment can increase muscle up to 25% and reduce fat up to 30% at the same time.

Non-invasive treatment with no radiation, pain or side effects.

More fat reduction and muscle growth than any single gold standard procedure, for less time and less money

The Renasculpt is the a non-invasive body shaping procedure that combines 2 energies for simultaneous fat elimination and muscle building in a 30-minute session. It can be applied over the abdomen, buttocks, thighs, arms & calves.

You can feel intense muscle contractions together with a heating sensation in the treated area which is comparable to hot stone massage. It is a completely non-invasive treatment that does not require surgery, needles, or any downtime. It organically combines High-Intensity Focused Electromagnetic Technology and RF to provide three therapeutic effects: muscle building, fat reduction and skin tightening during one treatment.

Workout Smarter Not Harder

Non-essential fat provides greater resistance to athletic motion thereby forcing one to increase the muscle force of contractions per given workout. This takes time, energy and a lot of patience, until one discovers Renasculpt.

High-Intensity Focused Electro-Magnetic Technology

High-Intensity Focused Electromagnetic Technology induces short bursts of powerful muscle contractions that lead to increased muscle density, decreased volume, better definition, and improved tone. Also the energy will eliminate the fat cells, so not only for muscle building, but also for fat reduction. Clinical research shows that after a course treatment, it can increase 16% muscle and get 19% fat reduction.

Electro Muscle Stimulation

Electronic Muscle Simulation stimulates a muscle contraction using electrical impulses, this stimulation creates muscle contractions that can be quick and frequent or fast with long pauses for good results on muscle building as well.

Radio Frequency

RF is a nonsurgical method of tightening your skin. The procedure involves using energy waves to heat the deep layer of your skin known as the dermis. This heat stimulates the production of collagen to tighten and firm up the skin.

Technical Specifications

Nozzles	5 Nozzles	Functions	Buttock lifting
Magnetic vibration intensity	1 - 15 Tesla		Muscle stimulation
RF frequency	20Mhz		Fat burning
RF Temperature	35 - 42 degrees	Voltage	110V/220V 50 - 60Hz
High-Intensity Focused Electromagnetic Technology	1 - 135Hz	Package Dimensions	69 x 57 x 112 cm
Cooling system	Air Cooling	Device/package weight	71/90 Kg

R235 000.00

A quick and easy body sculpting treatment
