- ✓ Shrink pores
- ✓ Skin firmness
- ✓ Blood Circulation
- ✓ Non-invasive
- ✓ Cryogenic stimulation

CoolShock shaping technology

Cool Shock is the most innovative and non-invasive way to reduce cellulite as well as tone and tighten the skin, it uses state-of-the-art thermography and cryotherapy (heat shock) to reshape the body. In each session, the Cool Thermal Shock treatment destroys fat cells and increases collagen production in the skin due to the reaction to the thermal shock.

He is also an advanced facial aesthetics and body contouring and fat reduction device that utilizes the technology of Cool Thermal Therapy designed to improve the quality of facial skin, reduce cellulite and contour the body.

For facials, the Cool Shock shrinks pores, improves skin tone, and reduces wrinkles and sagging skin through alternating hot and cold action. The cold mode relieves inflammation, reduces swelling, and firms the skin. While the hot mode improves blood circulation and stimulates collagen production for more elastic and glowing skin.

System Specifications:

Voltage	110/220V
Operating temperatures	-18 to 45 degrees Celsius
Screen	11,6-inch HD Smart screen
Weight	25kg
