Aesthetic Slimming Combined Slimming Therapy

The best aesthetic beauty solutions right here!

- ✓ High Intensity Focused Electro Stimulation
- ✓ Electro Muscle Stimulation
- ✓ Radio Frequency

RenaSculpt® Desktop Tripple technology

High-Intensity Focused Electromagnetic Technology + Electro Muscle Stimulation technology + RF. 3 Machines built into a single treatment.

High-Intensity Focused Electro-Magnetic Technology induces short bursts of powerful muscle contractions that lead to increased muscle density, decreased volume, better

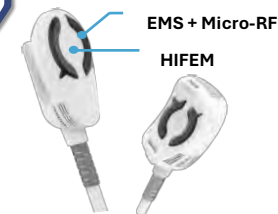

definition, and improved tone. Also, the energy will eliminate the fat cells, so not only for muscle building, but also for fat reduction. Clinical research shows that after a course treatment, it can increase 16% muscle and get 19% fat reduction.

Electro Muscle Stimulation, stimulates a muscle contraction using electrical impulses, this stimulation creates muscle contractions that can be quick and frequent or fast with long pauses for good results on muscle building as well. 15 Tesla Strength.

Radio Frequency RF is a nonsurgical method of tightening your skin. The procedure involves using energy waves to heat the deep layer of your skin known as the dermis. This heat stimulates the production of collagen to tighten and firm up the skin.

The total treatment time in one day may not exceed 1.5hours, one individual body part should not exceed 1 hour of treatment time at once. Optimal results 6 sessions

30 minutes treatment equals to 3000 muscle contractions or 3000 belly rolls / squats. A full course of treatment can increase muscle up to 25% and reduce fat up to 30% at the same time. Non-invasive treatment with no radiation, pain or side effects and no labour for your therapist

System Specifications:

Voltage	110/220V
Dimensions	Length 57cm x Width 43cm
Power	5000 Watt
Strength	15 Tesla
Screen	10,4 -inch HD Smart screen
Weight	94kg
