LED dental whitening technology

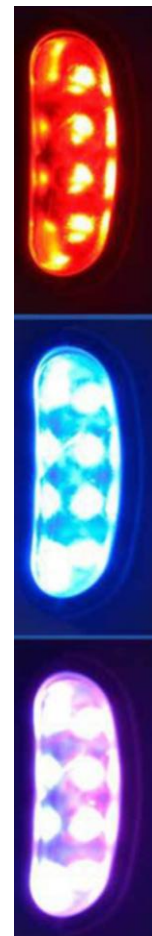

Adjustable LED triple color light with a wavelength of 460nm-490nm. The three colors represent different effects. Red light is for desensitization. Blue light is for whitening. Purple light is for sterilization

Blue, Red or purple light density of 200'300mw/cm2 assists with teeth discoloring due to smoking, aging, food, and health habits.

Each session lasts 10 – 15 minutes, but machine can operate 30 minutes at maximum setting.

According to dental sensitivity, choose the power strength between 40% and 100% for comfort.

This cold light operation system comes complete with two sized reusable mouth pieces, and Protective glasses

System Specifications:

Voltage	110/220V and 60Watt(Max)
